

NUDURA Project Profile

Bellarmino University Dorms - Louisville, Kentucky

FAST FACTS

- There is 165,481 sq ft of space under the roof in the Siena complex that is constructed with the NUDURA insulated panel system.
- The Extra benefit is that they felt they ended up with quality and very solid buildings which happened to be constructed on a hillside.
- On an additional note a few years ago a storm knocked out the power to the campus for a few days. The Siena buildings were able to stay occupied and the occupants reported that they stayed relatively comfortable despite the heat.
